

## TEXX 1135 A HEAVY LIFT FLATCAR

Charles H. Bogart

On public display at BNSF Northside Yard in Minneapolis in September 2019 was Transportation Technology Service car TEXX 1135, formerly CPOX 820. This 20 axels Schnabel railcar was built to transport oversize transformers that weigh up to 980,000 pounds. The car is to be upgraded in 2020 to increase its load-carrying ability to 1,135,000 pounds. Below are some photos I took of this awesome car at BNSF Northside Yard.
